PROFESSIONAL SUMMARY

Data Analyst with a B.Sc. (Hons) in Mathematics and hands-on experience analyzing 150K+ business records using SQL, Python, Excel and Power BI. Experienced in data preparation, validation, KPI reporting, trend and anomaly analysis, and translating business questions into dashboards and actionable insights. Strong attention to detail with a data-quality-first approach and proven ability to work independently across end-to-end analytics projects.

EDUCATION

B.Sc. (Hons) in Mathematics, M S Ramaiah University of Applied Sciences 2021–2024
Career Break – National-Level Competitive Exam Preparation

- Used this period for structured, self-directed learning: teaching myself SQL, Power BI and Excel from scratch and applying them to two end-to-end analytics projects across 150K+ records.

TECHNICAL SKILLS

Data Analysis & Programming: SQL (Joins, CTEs, Window Function, Subqueries), Python (Pandas, NumPy), Statistical Analysis
BI & Visualization: Power BI, KPI Reporting, DAX, Dashboard Reporting, Microsoft Excel (Advanced Excel, Power Query)
Databases & Tools: Google Workspace, Microsoft SQL Server, SSMS, GitHub, VS Code

PROJECTS

E-Commerce Business Insights — SQL, Power BI

- Analyzed a 7-table Olist marketplace dataset covering 99.4K orders and 96.1K customers; wrote 29 SQL queries for data preparation, KPI analysis, validation, trend investigation and business reporting.
- Validated a 3.12% repeat-customer rate against 97% order fulfillment and independently cross-checked the finding in Power BI using AI Key Influencers.
- Analyzed delivery performance and identified 8% of orders arriving after estimated dates despite a 12-day average, highlighting regional variation and exceptions for follow-up.
- Built a 3-page Power BI dashboard translating business questions into KPIs and insights, with SQL and dashboard outputs cross-checked for consistency.

Sales Analytics Dashboard — Python, Power BI

- Cleaned, transformed and profiled 51K order records using Python/Pandas, validating $12.6M sales, $1.47M profit, 11.6% margin and 3.97-day average shipping metrics.
- Investigated product and category-level trends to identify a small subset of products generating disproportionate losses despite strong sales volume.
- Analyzed discount levels against profitability and identified a declining profit relationship at higher discount tiers, supporting data-driven review of pricing decisions.
- Built a 3-page Power BI dashboard covering Executive Overview, Sales Performance, and Customer & Product Insights for KPI reporting, trend analysis and stakeholder-ready insights.

KEY STRENGTHS

Data quality first: Validates findings through an independent method before publishing any report or dashboard; attentive to inconsistencies, anomalies and metric integrity.
Owns the full pipeline: SQL for extraction and cleaning, Excel for ad-hoc analysis, Power BI for KPI dashboarding, end to end, on a self-set timeline.
Self-driven, proof-of-work oriented: Two full analytics projects built independently across 150K+ records, comfortable translating a business question into a technical solution and figuring it out.
